signal generation in analytical systems, and as anti-microbial agents. The VBPO is also useful for industrial applications. The VBPO is also useful for detecting a wide variety of chemical and biological materials such as amino acids, peptides, polypeptides, proteins including enzymes, avidin, antibodies and antigenic proteins, carbohydrates including encosaciantides, polypaccharides, polypaccharides, hormones such as human chorionic gonadotropin, thyroid stimulating hormone, luteinising hormone, thyroxine, follicle stimulating hormone, parathyroid hormone and growth hormone, metabolites such as glucose, lactate and pyruvate, oligonucleotides, nucleic acids, vitamins such as B12 and biotin, intact cells from various organisms including microorganisms and drugs such as narcotics, therapeutic and those abused

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and call-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBA2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell

The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polynucleotides and its complementary sequences may also be used as bus and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodies and in assays to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human proteins with hydrophobic domains and the nucleic acids encoding them, useful for preventing diagnosing and treating e.g. cancer, Alzheimer's and inflammation.
                                                                    Gaps

7
                  mucleic acids may be used as nutritional supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of microbial infections and autoimmune disorders such as multiple sclerosis, rhemmatoid arthritis and insulin-dependent diabetes), to modulate haematopoiesis, to modulate tissue growth activity (e.g. for the treatment of Parkinson's disease, Huntington's disease, disease), to modulate activin and inhibin activity (e.g. for controlling fertility), to modulate activin and chemoteatic and chemoteatic activity, to modulate haemostatic and thrombolytic activity, to modulate receptor ligand activity, to modulate inflammation and to inhibit tumour growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               65 LKRVAEINAAQNPNN---EVTYLLPQAIQVGSPTHPSYPSGHATQNGAFATVLKALIGLD 121

/note="Organ: Developed inflorescence (20cm-long) without
rachis; Vector: pSport1; Site 1: Sal1; Site 2: Not1; An
unidirectional cDNA library generated from [Developed
inflorescence (20cm-long) without rachis]. cDNA was
prepared from polyA+ mRNA using SuperScript Plaemid
System Kit (Invitrogen). The double-strand cDNAs were
fractionated in a sepharose CL-2B 40cm-columns and
fragments sizing between 0.8 and 1.5 Kb were
directionally cloned into the vector. Details of each
source of RNA and library construction can be obtained at

/done lib="dector: pBluescript II SK-; Site_I: BCORI; Site_2:
/note="Vector: pBluescript II SK-; Site_I: BCORI; Site_2:
Xhol; Deflagellation library, constructed by John Davies
and Jeffrey McDermott, combines cDNAs from CC-1690 cells
which had been re-synthesizing flagella for 15, 30 and 60
min after being deflagellated by pH shock. PolyA mRNA was
purified from each sample, pooled and cDNA synthesized.
The cDNA was directionally cloned into lambda Zap II
(Stratagene) in the EcoRI (5') and XhoRI (3') sites.
pBluescript II SK- plasmids were excised from the lambda
ZAP clones by superinfection with ExAssist (Stratagene)
phage. The library was normalized using method 4 described
in Bonaldo et al., (1996) Genome Research 6: 791-806."

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A & M University,
Sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.
Seq primer: Sug5 (CTTCTGCTCTAAAAGCTGCG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    148 GTCCAACTCTCGTGGCGCCCCAGGCCGTTC-----CTGCACAAGGGTTTCCTGTCG 198

Library constructed by Dr. Yitaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A & W University,
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.
Seq primer: Sugs (CTTCTGCTCTAAAAGCTGCG).

I "FUNCTION: Interacts with a specific negative regulatory element (NRE) 5'AATTCCTCTG3' to mediate transcriptional repression of certain NK-kappa-B responsive genes. Involved in the constitutive silencing of the interferon beta promoter, independantly of the virus-induced signals, and in the inhibition of the basal and cytokine-induced iNOS promoter activity. Also involved in the regulation of IL-8 transcription.
I SUBUNIT: Interacts with NR-kappa-B.

MEDLINE=97354288; PubMed=9210582;
MISOJation and characterization of the promoter region of the chicken
I scadherin gene.,;
Gene 191:7-13 (1997).

They preferentially interact with themselves in a homophilic manner in connecting cells; cadherins may thus contribute to the sorting of heterogeneous cell types. N-cadherin may be involved in neuronal recognition mechanism.

CHONCELLULAR LOCATION: Type I membrane protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IsoId=Q96RT7-2; Sequence=VSP_001624;
Note=No experimental confirmation available;
-!- SIMILARITY: Belongs to the GCP family.
-!- CAUTION: Ref.3 sequence_differs from that shown due to frameshifts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      by expressed sequence tag mapping.";

DNA Res. 8:1-9(2001)

--- FUNCTION: Gamma-tubulin complex is necessary for microtublule nucleation at the centrosome.

--- SUBUNIT: Gamma-tubulin complex is composed of gamma-tubulin, GCP2, GCP3, GCP4, GCP5 and GCP6.

--- SUBCELLULAR LOCATION: Centrosome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TPDAVCNELDGDEFRIYELVWRRTVASQMADARGTTLSLRIEGRAGEOHVVFSASGRTLT 461
MISCELLANEOUS: When a topoisomerase transiently breaks a DNA backbone bond, it simultaneously forms a protein-DNA link, in which a tyrosyl oxygen in the enzyme is joined to a DNA phosphorus at one end of the enzyme-severed DNA strand. SIMILARITY: Belongs to the prokaryotic type I/III topoisomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GMGGFPNLDAVSI-GSDGTVDPFSQLF----RATFVGV-ETGPFVSQLLV------

The complete genome sequence of the Arabidopsis and tomato pathogen

The complete genome sequence of the harabidopsis and tomato pathogen

Proc. Natl. Acad. Sci. U.S.A. 100:10181-10186 (2003).

- I- FUNCTION: Involved in the biosynthesis of lipid A, a

phosphorylated glycolipid that anchors the lipopolysaccharide to

the outer membrane of the cell [89 similarity].

- I- CATALYTIC ACTIVITY: UDP-3-O-(3-hydroxytetradecanoy1)-

acetylglucosamine + H(2)O = UDP-3-O-(3-hydroxytetradecanoy1)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              522 AIQVGSPTHPSYPSGHATQNGAFATVLKALIGLDRGGECFPNPVFPSDDGLELINFEGA 580

--- CORPACTOR: Binds 1 zinc ion per subunit (By similarity).
--- PATHWAY: Histidine biosynchesis; ninth (last) step.
---- SIMILARITY: Belongs to the histidinol dehydrogenase family.
                            Archaea, Euryarchaeota, Methanobacteria, Methanobacteriales, Methanobacteriaceae, Methanothermobacter.

--- TISSUE SPECIFICITY: Weakly expressed in most tissues, except in brain. Expressed at intermediate level in brain, including cerebellum, substantia nigra, thalamus, spinal cord, hippocampus and fetal brain. Also expressed in testis.
--- SIMILARITY: Belongs to the CSMD family.
--- SIMILARITY: Contains 19 Sushi (SCR) domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pfam; PF00141; CUB; 14.

-!- FUNCTION: DNA motor protein, which is both required to move DNA out of the region of the septum during cell division and for the septum formation. Tracks DNA in an ATP-dependent manner by generating positive supercoils in front of it and negative supercoils behind it. Also plays a role in resolution of dimer chromosomes by requiating the xerC and xerD recombination complex, possibly by switching the catalytic state of the two recombinases. Required for the targeting of ftsQ, ftsL and ftsI to the septum
                                                                                                                                                                                                                                   STRAIN=KIMS / Biovar Mediaevalis;
